INSTRUCTIONS FOR DO-ALL BANGLE ASSEMBLY

- A. You will need a piece of .035 "hard round hard wire for the hinge pin, and a piece of .020" x .070" flat wire (half hard) for the safety.
- B. Insert Joint (hinge) (1) with short flange on top (2) into bangle shell. The springiness of the shell will hold joint in place. **No** clamping or binding wire is needed. The joints are wide enough for easy centering in shell.
- C. Hold Bangle Shell at about 45° angle upright on asbestos board (transite). Use tweezers or weight to hold shell in position for soldering. Use easy flow wire solder or paste. Flush solder around joint. Make **certain** solder fills all openings.
- D. Use a .035" drill to clean hole in joint (3) (hole is .035" to begin with). Take **HARD** round wire .035" (-.0000"+.0005") and hold in small pin vise. Shape (file) end of wire. Dip end into wax for easy entry into hinge. Grind excess metal of the short flange of the hinge (2) away and file to outer shape of bangle shell.
- E. Cut shell through slot provided on other end of shell and bangle will open.
- F. With open shell held towards you with hinge side up, file a flat and cut slot (9) on **left** end of shell, wide and long enough to let pusher (7) of snap (4) enter freely. To cut slot, it is best to use small carborundum wheel.
- G. Clean black coating off **OUTER** wall of male plate (6) with needle file, or better, with a fine emery wheel.
- H. Insert snap assembly (4) (female and male are together and have a protective coating in between — same as joint — to prevent the parts from soldering together) into shell. Push both parts of shell together, center the snap (snap is wide enough and easy to center in shell) and solder using same procedure as described above for joint.
- I. Cut away excess metal of joint's large flange inside shell and of snap — inside and outside of shell. Use scissor for cutting and then use file for outside and small grinding wheel for inside of shell.
- J. Cut end of pusher (7) to desired length.
- K. Take flat wire (10) half hard .020 thick x .070 wide x 1-3/8" to 1-1/2" long for safety. Anneal one end and make a **SHORT** 90° bend. Before inserting into slot on diagram (12) break corners (11) (in order not to scrape inside top shell (14) when sliding). File a little flat (13) on end of tongue (8) and solder flat wire to tongue with tiny bit of solder and little heat (in order not to weaken the spring of tongue).

YOUR BANGLE IS READY FOR POLISHING AND/OR ENGRAVING.
